

LLNL-specific material models and test suites

Placeholder linked report for the GEOS-MPM starter manual.

Status

The uploaded archive did not include a separate LLNL-specific/internal material-model report. Replace this placeholder PDF with the future report generated from the corresponding out-of-tree material-model documentation and test suites.

Expected content

- External/internal constitutive model build hook and registration notes.
- Material-model theory and calibration references.
- Verification, validation, and regression suites for private or export-controlled material models, as appropriate.
- Links back to the GEOS-MPM manual, ParticleFileWriter material dictionaries, and suite reports.
